Over the last few years Ark John Keats Academy has undertaken a major refurbishment, creating a positive future for the children and young adults within the area. Ark John Keats Academy has become one of the first all-through schools in the borough of Enfield, with its students now ranging from nursery all the way through to sixth form.

Ideal in high traffic areas.

Our versatile, robust Splash Solid Grade Laminate system was specifically chosen for the pupil's toilets and shower cubicles. As this range is hard-wearing in both wet and dry environments, it was the perfect choice to serve its purpose in these high traffic areas. Splash will stand the test of time, showing its strength and easy ability to clean even after a muddy football game.

Ark John Keats chose our Playtime and Acorn ranges for their very first Nursery and Reception class pupils, and what a great choice that was! Playtime and Acorn are fantastic for this age; our sweeping divisions and arched doors ensure they have enough privacy to go to the toilet, but also ensure a helping adult is at hand's reach if need be. Our safety features include emergency release indicator bolts and anti-finger trap hinges to ensure the children are safe.

Matching colours were selected for the pilasters to keep a constant theme in the school. As you can see, our bright and welcoming colours were chosen on the doors for the young students and a more relaxed feel for the older ones. Our tough ABS fixtures and fittings were a preferred choice for all the systems.

Impressive products

Bouygues were the lead contractor on this project, and they were extremely impressed with Amwell's products and customer service. Our preferred installers, Shires Integrated, were chosen to install the products.

Bouygues Site Manager, Jon Fitzgerald had the following to say about Amwell Systems:

"We are very happy with the installation and the product. There were no issues when installing the products, a very easy installation. As we are working on a school project, the product must have certain quality attributes. It must be hard-wearing, robust and must be cleaned easily, the product has achieved all these points. Moving forward I would definitely use Amwell products again. We will work together again in the near future."
